

Usability and Testing – CA3 Group 10.

1. User 1

Background: 1st year TUD student with basic knowledge of technology. No experience in coding or web development.

Tasks:

- Find your timetable
- Find where the student union is on the map and find additional information on it
- Find the room first class on Friday is taking place in

User's Results:

1. User was able to navigate to the Timetable section quickly using the nav bar
2. User was able to locate the campus map using the nav bar; they then located the location of the student union building by locating "SU" on the map. To find the details they pressed the tile corresponding to it.
3. User navigated back to the timetable using the nav bar, they then went on to press "Friday". They found the first class on that day, pressed on it and were able to state the room it is taking place in.

User's Feedback:

1. Were the tasks easy to complete?
Answer: yes, the lay out was easy to navigate and understand.
2. What was the most confusing part of the site?
Answer: some pages were not in the right place, eg. Library nav bar navigated to a different page rather than library.
3. What did you like about it the most?
Answer: Ease of use, simple and good-looking design
4. If this app were to replace our current college services, would you prefer to use it and why?
Answer: yes, the college's current timetable system is very confusing. It doesn't show you where the rooms are and it's difficult to operate.
